

Ski Swap POS - User Guide

A practical guide to the Ski Swap point-of-sale system for Admins, Intake personnel, and Cashiers.

The system supports the full consignment flow for a MYSL Ski Swap: sellers bring equipment at intake (everything is labelled with a barcoded tag), the tagged items are sold at the checkout during the swap, and afterwards reports settle what was sold, what is still on hand, and what is due to each seller. MYSL retains a commission (30% by default) on every sale.

Role	Lands on	Can do
---	---	---
Intake	Intake	Register sellers, check in items, print labels, bulk-im
Cashier	Checkout	Look up items by code, build a cart, take payment, c
Admin	Admin (Event Setup)	Everything, plus Events, Users, Reports, End of Day

1. Getting started

1.1 Signing in

Open the app at <<https://mysql-pos.duckdns.org>> (or <http://<server>:8000> on the LAN). Enter your username and password and press Sign In.

Ski Swap POS

Username

Password

Sign In

Demo accounts (seeded): admin / admin123, intake1 / intake123, cashier1 / cashier1. Change these before going live.

1.2 Getting around

After signing in, the top navigation bar shows the pages your role can access:

- Intake - seller check-in and item entry (Intake + Admin roles)
- Checkout - the point of sale (Cashier + Admin roles)
- Admin - Event Setup, Users, Sellers, Reports, End of Day (Admin only)

The right side of the bar shows who you are, your role badge, and buttons for Change Password and Sign Out. The landing page depends on your role (Admins land on Admin, cashiers on Checkout, intake staff on Intake).

1.3 Your account

- **Change Password (top-right)** - change your own password at any time.
- **Sign Out** - ends your session. Do this at the end of a shift, especially on shared computers.

2. For Intake personnel

Intake staff run the check-in: every consignor (seller) is registered, every item they consign is recorded and labelled, and everything is tracked so payouts and donations are correct at the end of the swap.

2.1 The intake workflow

Open the Intake page. The module has three tabs: Intake (the check-in workflow), Sellers (the full seller list), and Search (find any item by any field).

The check-in workflow is step-by-step:

- | | |
|-------------------|--|
| 1. SEARCH | find the seller by name or code |
| 2. REGISTER | new seller? capture their details here |
| 3. INTAKE SESSION | one session per drop-off (donation elections) |
| 4. ADD ITEMS | enter each item (category, brand, size, price, quantity) |
| 5. ITEM LIST | review, edit, print labels, totals |

2.2 Find or register the seller

Start typing a name or code in Seller Search. Pick the returning seller, or choose to register a new one - the registration form captures name, phone/email, address, and the vendor flag (commercial dealers use the company name).

2.3 Create the intake session

Each drop-off gets an intake session. On the session you set the seller's donation elections:

- Donate unsold items - anything not sold is donated to charity instead of returned.
- Donate proceeds - the money from sold items is donated to MYSL (the seller receives nothing for sold units).

These elections pre-fill new items and drive the end-of-event reports. They can be overridden per item.

2.4 Adding items

Use the Add Item form. Fields adapt as you go:

- Category - e.g. Skis, Ski Boots, Ski Poles, Snowboard, Helmet, Clothing. Required.
- Type - narrows to the category: Skis offers Classic / Skate / Combi / Other; Ski Boots offers Classic / Skate / Combi / Touring / Other; Clothing offers Base Layer Bottom / Base Layer Top / Gloves / Hat / Head band / Jacket / Ski Pants / Ski suit (+ Other).
- Brand - a typeahead suggests known brands for the category (for Skis: Atomic, Fischer, Karhu, Kastle, Madshus, Peltonen, Rossignol, Salomon, Yoko; for Ski Poles: 4KAAD, KV+, Leki, Madshus, One Way, Rossignol, Salomon, Swix, Yoko; for Ski Boots: Alpina, Atomic, Fischer, Madshus, Rossignol, Salomon; for Clothing: Daehlie, Swix, Craft, KV+, Patagonia) plus every brand already used in the event. Custom brands can still be typed.
- Size - a dropdown with sizes appropriate to the type (cm lengths for skis, mondo for boots, letter sizes for clothing); types without a known size list use a free-text field.
- Price - whole dollars, rounded up automatically.
- Quantity - how many identical units this row covers (each unit gets its own tag at checkout of the label printer).
- Used - untick for brand-new items.
- Donate if unsold - per-item override of the intake election.

The item code is generated automatically - it combines the seller's code and a sequence number (e.g. seller JSMI1 ? items JSMI11, JSMI12, ?), and it is what the barcode label prints.

2.5 The item list

Every item in the intake is listed with Code, Category, Description (brand - description), Price, Qty, Total Price (price x full quantity), On Hand, and label status, plus a totals footer (item count, total units, total value, on-hand).

Per-item actions:

- Edit - opens an inline panel to fix description, price, brand, type, size, gender/age, colour. Save or Cancel.
- Print All Labels - prints one tag per on-hand unit for that item.
- Print (with the count box) - prints an exact number of labels for that item.
- Delete - removes an item that has not yet been labelled or sold (a confirmation is shown; labelled or sold items cannot be deleted).

The header button Print Labels for All Items prints tags for every item in the intake at once.

2.6 Printing labels

Labels are Zebra tags (Code 39 barcode, seller code + price, description) printed on the configured label printer. Printing marks the item as label printed - after that, the item can no longer be deleted (its tags are already on the merchandise).

- Print All Labels (per item) - one tag per on-hand unit.
- Print N (per item) - an exact number of tags.
- Print Labels for All Items (header) - tags for the whole intake.

If the printer is unavailable, a red message explains it; nothing is marked printed.

2.7 Importing items from Excel

For large consignments, use Import from Excel on the intake tab:

1. Download Template - fetch the blank 12-column template.
2. Fill one row per item: Description, Category, Brand, Type, Color, Size, Gender/Age, Year, Price, Used, Donate if Unsold, Quantity.
3. Import the file. Every row is validated; valid rows are created and invalid rows are listed with row numbers and reasons (fix the file and re-import).

Prices round UP to whole dollars. Brand names are matched to existing brands when they are close (typos snap to the known brand).

2.8 The Search tab

The Search tab finds items across the whole event by any field: code, description, category, brand, type, colour, size, gender/age, year, price, quantity, status, and seller name/code. Filter by status and download the results as Excel.

2.9 The Sellers tab

Browse every seller in the event, open a seller for their detail (items, sales), and reach their Due Seller payout report.

3. Cashiers - the checkout

3.1 Looking up items

On the Checkout page, scan the item's barcode or type the item code and press Enter. Partial codes work too - the lookup matches item codes only and shows an autocomplete list; pick the item from the list or press Enter for an exact match.

Sold-out items are flagged and cannot be added.

3.2 The cart

Each scanned item becomes a cart line with its quantity, sell price (editable for negotiated prices), and optional notes. Remove lines with Remove. The total updates as you go.

3.3 Taking payment

The payment form splits the tender across:

- Cash (\$) - the cash amount.
- Check (\$) - plus a Check Number (required when a check is used).
- Credit Card (\$) - the card amount, entered manually.

The tendered total must meet the sale total before the sale can complete. The Square card-reader integration is pending and hidden.

3.4 Completing the sale

Press Complete Sale. A green confirmation banner shows the receipt (sale number, total, tender breakdown, cashier). Press New Transaction to clear the cart for the next customer, or Cancel to abandon a checkout before completing it.

4. Admins

Admins can use everything above (Intake and Checkout), plus the Admin page with five tabs: Event Setup, Users, Sellers, Reports, and End of Day.

4.1 Event Setup

- Create an event (name, year, commission rates for individuals and vendors) and make it the active event
- everything else in the app works against the active event.
- Delete an event: permanent and cascading (it removes the event's items, intakes, sellers, sales, and user accounts). The active event and the event you are signed into cannot be deleted.

4.2 Users

Create cashier and intake accounts (username, password, role), reset passwords, and deactivate users. Deactivated users cannot sign in.

4.3 Sellers

The seller directory: search, open a seller, see their items and payout status, and open their Due Seller payout.

4.4 Reports

All reports support CSV / Markdown / PDF / Excel downloads.

- Due Seller (per seller) - search a seller and download their statement as XLSX or PDF. The statement includes the seller's contact information, a Sales section (every sale line with date, prices, and the amount due), and an Unsold Items section (everything still on hand, including donated and returned items). Sellers whose intake elected Donate Proceeds show \$0 due - their proceeds went to MYSL.
- Generate All Due Sellers - payouts for every seller at once, with grand totals, per-seller Download XLSX / PDF buttons, Download CSV (all), and Download ZIP (Excel + PDF per seller) - one Excel workbook and one PDF per seller, ready to hand out individually.
- Event Revenue - totals by payment type (cash / check / credit card), MYSL vs seller shares, voided sales.
- Donations - items and proceeds donated to MYSL.
- Unsold Items - everything still on hand at close.
- Transactions by User - every sale grouped by the cashier who recorded it.

4.5 End of Day

The daily summary (sales, voided, revenue by payment type) plus a full database backup download (a ZIP with the SQLite database and a JSON export).

4.6 Deleting an event

From Event Setup, inactive events can be permanently deleted. The active event, and the event your own account belongs to, are protected. Treat deletion as a year-end cleanup action only.

5. Notes and troubleshooting

Situation	What happens / what to do
---	---
Item shows sold out	All on-hand units are sold. Check On Hand on the item in the intake list.
"Amount due \$0.00" on a payout	The seller's intake elected Donate Proceeds - the gross went to MYSL as
Check payment rejected	Enter the Check Number; it is required whenever a check amount is used
"Printer unavailable" when printing labels	The label printer is not reachable at the configured device. Retry after ch
Cannot delete an item	Items that are label-printed or sold cannot be deleted (tags are in the field
Need yesterday's data	Backups run every 6 hours to ~/skiswap-backups/; recovery steps are in
